# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

\*\*\* Cool and Moist pattern will continue \*\*\*

\*\*\* Gusty southerly winds Wednesday and Thursday \*\*\*

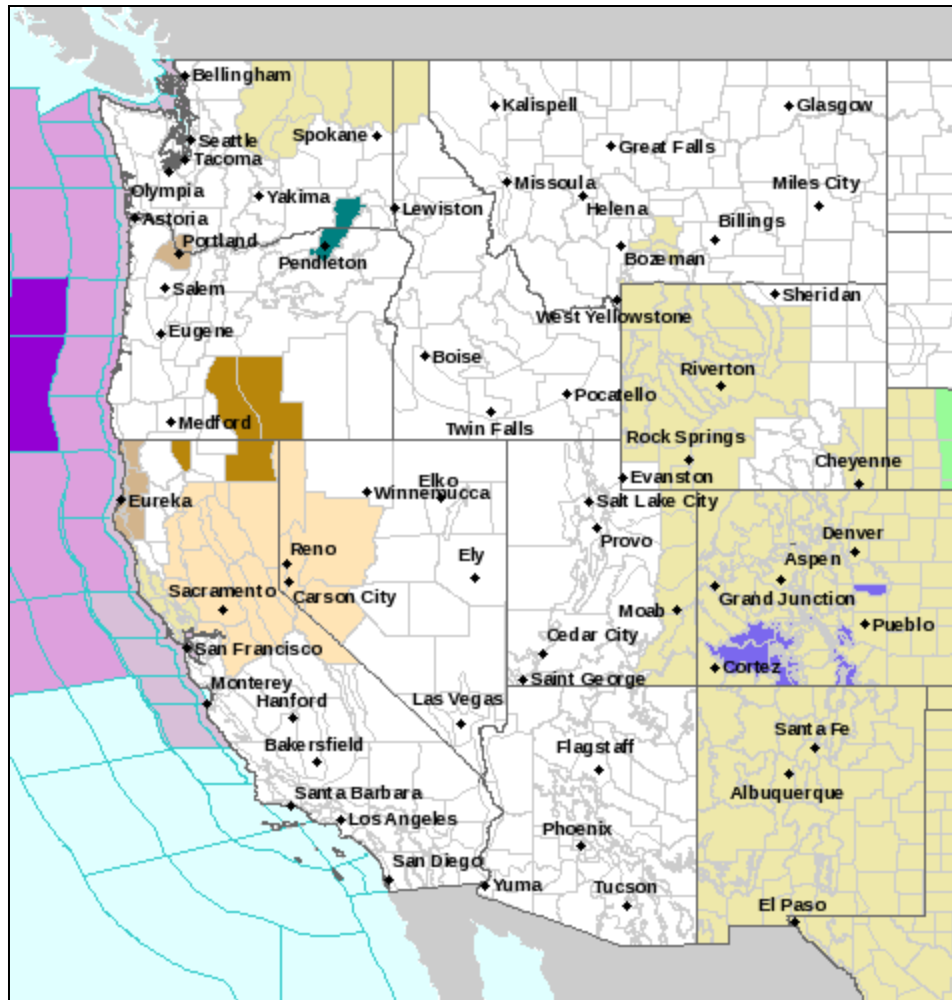

One of the drier days of the next 7 will occur today as a strong Pacific low nears the region. Higher cirrus clouds found ahead of the low will overspread the area and humidity values will be hard pressed to fall below 20 percent. Another lighter wind day although some breezes to 30 mph will be found across the far northern tier. The Pacific low will induce a significantly moist southwest flow Wednesday and Thursday with lasting effects into Friday. Temperatures will be cooler than normal with abundant cloud cover and higher humidity. Wetting precipitation, in the form of mainly rain, will impact a good portion of the region. Favored areas include the Mid and North Coast, Northwest Mountains and Northern Sierra. Peak liquid water amounts in the favored areas could be as high as 3.0 inches. Wednesday and Thursday night's appear to be the best periods for the heaviest precipitation. Snow accumulation levels will generally be above 7000 feet making it a warmer system compared to the past two. Strengthening southerly winds will be the other weather story during this period. Gusts between 30 to 40 mph with locally higher speeds possible. Drier weather expected Saturday. Another in a series of Pacific lows is expected to impact the area as early as Sunday and extend into early next week. Another round of wetting precipitation will be possible then.

## **SOUTHERN CALIFORNIA**

Weak cyclonic circulation will continue to generate deep marine layer stratus and some patchy drizzle over coastal areas of Southern California today. Otherwise, expect mostly sunny skies and seasonable temperatures today. Highs will range from the 60s at the coast to the 70s in the valleys. Winds will be light for the most part. A cold, tightly wound, storm system will enter the Pacific Northwest Wednesday, bringing widespread rain to the northern half of the state Wednesday night. Most of the precipitation will remain north of the district, but the central coast and Sierra Foothills may see a tenth to a quarter of an inch of rainfall. The Sierras from Yosemite National Park northward may receive a half an inch of rainfall. All precipitation should end Thursday. West winds of 15-30 mph will be possible over the desert during the afternoon hours Wednesday and Thursday. A slight warming trend is expected over the weekend along with sunny skies and light winds. A similar storm system may impact the northern half of the state once again Monday. Some gusty north winds may occur in the wake of this system early next week, but no offshore winds or periods of hot weather are expected the next 7-10 days.
